

SUPPLIER, PRODUCTION AND CARGO CONTROL IN SOUTHEAST ASIA

We solve every issue related to product supply through a single-window approach

Supply support at key stages

Supplier audits, production control, logistics control

**Minimize risks in supply and production.
Contact us for a consultation!**

LVS GLOBAL

LVS Global is an international company working with suppliers and manufacturers across Southeast Asia. The company supports the supply chain at every stage — from supplier selection to production and logistics.

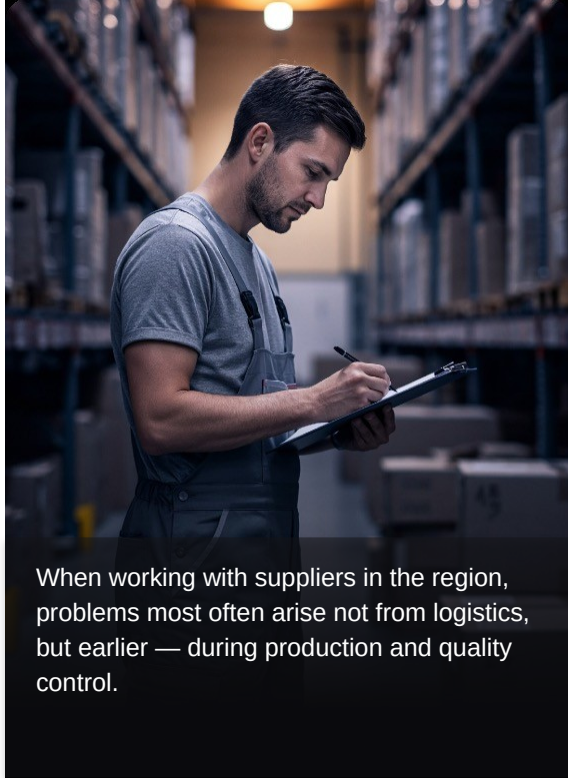

HOW WE WORK

Own staff based in the region

On-site visits to production and logistics facilities

Documentation of product condition and processes

COMMON RISKS WHEN WORKING WITH SUPPLIERS

The Supplier's production capacity does not match the order volume required by the Customer

Non-compliance with loading / unloading / transport rules, including temperature control, leading to product damage

Non-compliance with storage rules, leading to product damage

The quality of the finished product does not match the declared specification

KEY TASKS CLIENTS COME TO US WITH

Most LVS Global projects involve practical supplier-side control tasks.

We provide support with:

— selecting a new supplier

— releasing a large batch of goods

**Supplier-side
control**

— launching production of new products

— handling goods with elevated quality requirements

SUPPLIER AUDIT

We conduct the audit before starting cooperation or before placing a large order.

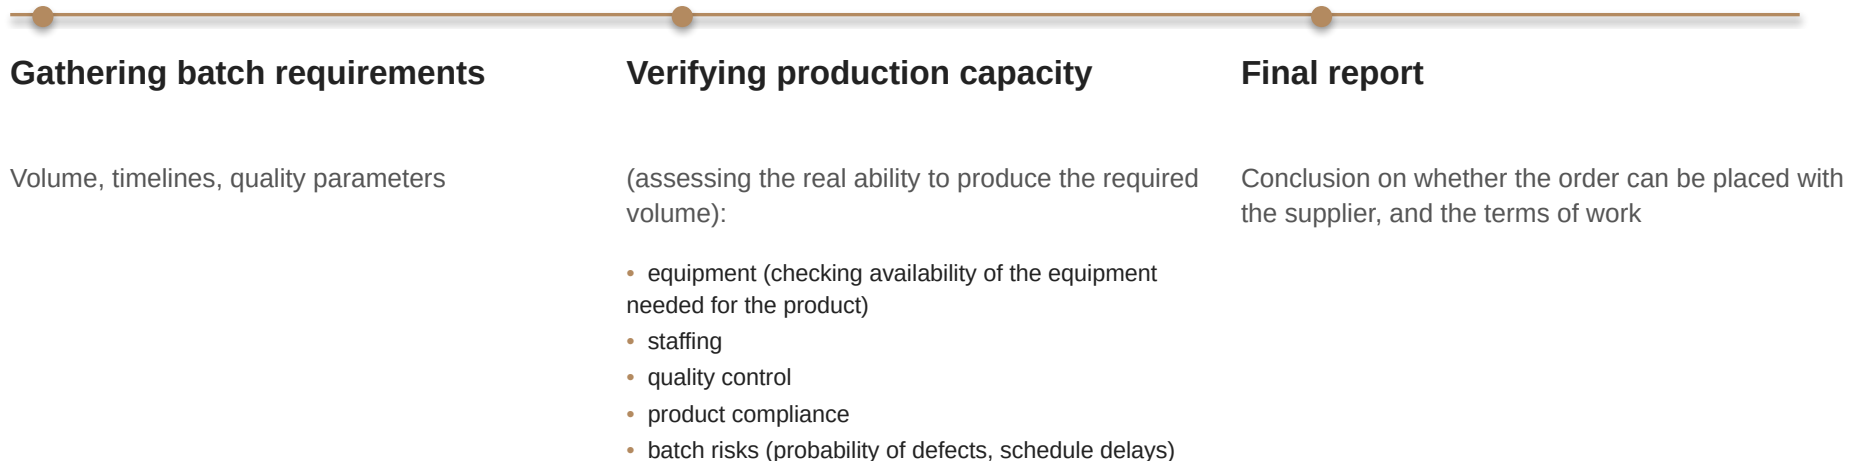

The goal is to understand the supplier's real capabilities and the risks of working with them.

As part of the audit, we assess production capacity, review process organization, and compare declared product specifications with actual ones.

Outcome:

We provide clarity on whether the order can be placed, and under what conditions.

Sequential audit process

PRE-SHIPMENT INSPECTION AND SURVEY

A specialist is present at the production site and inspects output at agreed stages:

- control of the process itself;
- random quality checks for each batch;
- documentation of any deviations found.

Production cycle overview

- 1** Inspection of raw materials and components; control of production preparation, launch, and main output
 - 2** Random checks during production, and of the final batch
 - 3** Verification of quantity and quality; packaging and labeling
-

FIRST BATCH CONTROL

Quality checks during production of the first batch help detect defects early, address the root cause, and reduce the risk of large-scale losses.

1

Pre-release preparation

Verification of certification, samples, and requirements

2

Production launch

Confirmation that all materials and equipment are ready

3

First units

Inspection of the first produced units

4

Pre-shipment preparation

Inspection of packaging and labeling

5

Batch completion

Final quantity and quality control

6

Mid-batch

Random inspection during production

LOGISTICS OPERATIONS CONTROL

We carry out inspections during loading, transshipment, and unloading, checking quantity, product condition, and packaging — including compliance with regulations and transport conditions.

1. Supplier's warehouse

Checking batch readiness, quantity, and condition

2. Loading

Verifying that the correct goods are loaded in the required quantity

3. Departure from factory or port

Recording condition and seals

4. Transshipment or transit hub

Checking integrity and condition during transport change

5. Receipt at destination warehouse

Verifying quantity and condition upon receipt

PRODUCT QUALITY EXPERTISE

Sample collection

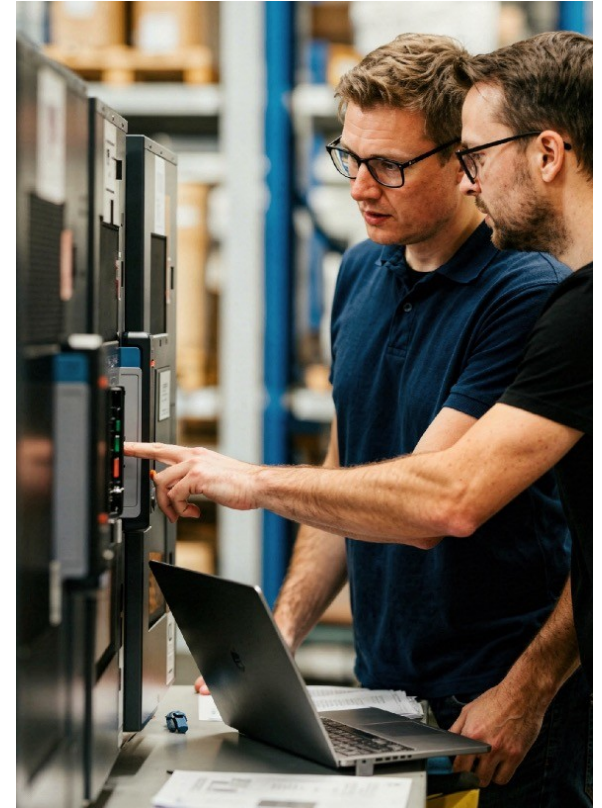

Instrumental measurements

Verification of product parameters, including the fresh produce (fruit & vegetable) and frozen goods categories, for compliance with regulatory requirements

Conducting laboratory testing when visual inspection is not sufficient.

We work with all types of non-food products, as well as food products.

Comprehensive support

UPON REQUEST, THE COMPANY TAKES ON ALL STAGES OF SUPPLY CONTROL:

COOPERATION FORMAT

You can order a single service, or several — in practice, clients most often order a full package of services, as it makes the outcome easier to control.

— We solve every issue related to product supply through a single-window approach.

STOCKTAKING

An additional service.

Used in individual projects at the client's request.

Stocktaking process

Physical recount of goods

Reconciliation with accounting records

Verification of product listing (if needed: condition check, photo and video documentation)

Recording discrepancies

Report
